

Student Name : _____

WHAT GETS MEASURED GETS MANAGED

Please use common sense here. If a client is quite unsteady then only have them do the test you feel they can do safely. Just write a brief comment if they cannot safely do a test.

Please take a walk VIDEO

TUG Test (back against the chair) Timed-Up and Go

Instruct the client from a sitting position to stand up and walk to the line(10ft away) and turn around and walk back and sit down. The timer starts as soon as they attempt to get up and as soon as they sit down.

Vous allez commencer à vous asseoir et quand je dis GO, je veux que vous vous leviez et que vous marchiez à 10 pieds du marqueur, au marqueur revient et assoie sur la chaise. On fait seulement une fois.

Date: _____ Time: _____

Date: _____ Time: _____

Motor (with water -Same test as above, but give them a glass of water to walk with)

Date: _____ Time: _____

Date: _____ Time: _____

Sit-Stand (5 times) This test starts sitting and then instructs the client to stand up then immediately sit back down and have them do this 5 times. The timer starts when you say GO and stops when they sit down on their 5th time. YOU can count just asking them to stand and sit until you say stop.

Je vais vous demander de vous lever puis de vous asseoir immédiatement et j'ai besoin que vous le fassiez 5 fois. Le chronomètre démarre lorsque vous dites GO et s'arrête lorsqu'ils s'assoient pour la 5ème fois.

Date: _____ Time: _____

Date: _____ Time: _____

Step Ups (30 seconds)

Use a stepper and have the client step up completely and back down with both feet. One step up and down counts as one full step. You count the steps and have the client concentrate on stepping safely.

Je veux vous voir monter sur le stepper en tête avec un pied, puis enjamber et recommencer de l'autre côté avec le pied opposé en tête.

Date: _____ Number of step ups: _____

Date: _____ Number of step ups: _____

Stroop TEST:

The Stroop test is a measure of working memory and attention. When the colors and words are conflicting, the brain must work hard to filter out competing signals. Reading is such an automatic task that the brain needs to actively inhibit it and direct its attention instead of saying the color of the letters. The resulting delay is called the Stroop Effect.

Task (read words or say color of letter)	Conflicting (Yes or NO)	Errors	Time	DATE
Read the Words				
Say the color of the words				
Re-Assessment	Conflicting (Yes or NO)	Errors	Time	DATE
Read the Words				
Say the color of the words				

Name of Assessor: _____

What class level are you recommending them for? What frequency and days of classes is the client interested in?

Comments:

Assessment Results

Client:

Please be sure to fill out all test results or mark down why they cannot perform the test. Keep comments clear for everyone to understand.
