PLAN OF ATTACK • WORKSHEET 1

Tests to be performed at start and end of program

#1-TUG TEST (back against the chair) Begin by sitting back in a standard arm chair and identify a line 10 feet away, on the floor. Start with your back against the chair. Have someone say GO. The time starts and you begin walking to the line and then back to the chair. Stop timing after you sit back down.

Only do test once. The other Dates are for re testing at a later date.

Date: _____ Time: _____

Date: _____ Time: _____

Date: _____ Time: _____

#2-SIT-STAND (5 times) Sit in the middle of the chair. Place each hand on the opposite shoulder crossed at the wrists. Place your feet flat on the floor. Keep your back straight and keep your arms against your chest. When someone says the command GO, the time starts and you rise to a full standing position and then sit back down again. Repeat 5 times.

Date: _____ Time: _____

#3-STEP UPS (30 sec) Find a sturdy step to use. The bottom step of your stairs works well too. I want you to step all the way up with both feet (one at a time) on to the top of the step and back down. You are not stepping over it, just to the top and back down. Getting one foot up to the top and then the other foot and then back down counts as one step. Continue for 30 seconds and see how many complete steps you can get.

#4-DOWN TO THE GROUND For this test you start standing up. Make sure you have a chair or you are near a couch especially if you have not had experience getting down to the ground. PLEASE do not try this if you don't have someone spotting you or have help to get back up if you get stuck. It's also recommended to try this on a soft floor and not hardwood floors on your first attempt.

Your goal is to have yourself timed getting down to the ground onto your belly and then back up again. Use support such as a chair as needed but the goal is to have you practice the exercises given in the program to get you down to the floor safely and back up again.

#5-SINGLE LEG TEST This test helps you identify whether you are at risk for falling. Please make sure to have a chair in front of you during this test for safety. Perform this test with your eyes open and arms on your hips.

You must stand unassisted on one leg and be timed in seconds from the time one foot is flexed off the floor (not too high, just enough not to be touching the floor) to the time when it touches the ground or the standing leg or an arm leaves the hips.

Left Leg (standing leg): **Date:** _____ **Time:** _____
